Refund Policy - Full refund if requested prior to May 13, 2015, no refund on day of course (May 13, 2015), or later.
Course Overview

Dentists play an important role as primary healthcare professionals. They need to screen and monitor patients for underlying medical conditions, and are required to render care to an array of medically complex dental patients. Patients are also becoming more aware of the emerging oral-systemic connection and dentists need to be able to address patients’ queries and concerns.

This presentation will discuss common chronic diseases that impact on the provision of care delivery, provide a concept on how to deliver safe and appropriate clinical care to patients with complex medical conditions, and review updated information on the possible effect of oral infections on systemic diseases.

Participants in this course will learn:

1. How health information impacts on dental care
2. How the role of oral healthcare professionals is changing in the care of their patients
3. How to alter routine dental care according to patient’s medical condition
4. How to incorporate information about the emerging oral-systemic health connection into care of patients
